Reply to Attn of: EA-05-009

TO: JA/Director, Center Operations

FROM: EA/AMS Project Manager

SUBJECT: Temporary Storage Review – Case File 99-005

I recently received a letter (JB9-05-226) which was addressed to the Director of Space and Life Sciences concerning the storage of the AMS-01 Mass Simulator Assembly valued at \$600,000. This letter serves two purposes: 1) to inform you that the management of this project has changed from SA to EA and all subsequent correspondence should come to my attention. 2) The AMS project would like to continue the temporary storage of this hardware as we do have plans to utilize this hardware this year during the development of mass simulators for the AMS-02.

If temporary storage is seriously short, we may be able to find room for the hardware in our controlled storage area in Building 10. Please contact me if this is required.

Sincerely,

Stephen Porter
